Anxiety

WHO IS THIS THIS PHENOMENAL

ESTIFANOS

I THINK OF MYSELF AS A SPIRITUAL BEING, EXISTING AS A CONDUIT FOR THE DIVINE TO RAISE THE VIBRATIONAL FREQUENCY OF THE EARTH, SO THAT MORE OF CHRIST CONSCIENCE CAN OCCUPY THIS REALM.

I CERTAINLY STAND DEEPLY ROOTED IN SPIRITUALITY AND MY FELLOWSHIP WITH THE MOST HIGH. I BELIEVE GOD TRULY PRESERVES US AND KEEPS US YOUTHFUL WHEN WE WORSHIP HIM WITH OUR LIVES.

MEET ESTIFANOS

Estifanos Berta-Samuel, born 31, July, is an Ethiopian fashion model; fashion coordinator, actor, dancer and entrepreneur. Raised in the United States by his grandmother and mother after his parents ended their relationship this young man already knew he was destined for greatness regardless of any hardship coming his way, Estifanos already had a story to tell. For most of his schooling days, he found himself isolated because of the amount of teasing he had to endure from other children, especially about his long legs and East African looks. It wasn't until he was introduced to the world of modelling at the age of sixteen (16) that he used his painful experiences to prove that being different was a blessing that saw him rise to the top as one of the only African male models to obtain his current level of success.

Kha: Can you compare how people view health * where you are now in Atlanta in comparison to South Africa where you are at times?

Est: The culture centered around food and health amazes me! I am presently in Atlanta, Georgia, USA where people seem to view health from a medical perspective dictating their lifestyle choices. I'm sure that is largely attributed to the fact that the health care system garners mega revenue for the economy. So, in short many people are focused on "good health" due to fear of certain health + financial crisis. Another sect of society is heavily body conscious, and the conversation immediately leans toward their physical appearance, all be it vain in some cases. If people want "a taste of home" it is viewed as a moment to steal away before, rather reluctantly, rushing back to the norm. The perspective in SA? The conversation about health is focused on longevity, life expectancy and quality of life. People in SA innately know how to step out of the hectic construct of the Western World and sort of "reset" to create a lively atmosphere of home and community! I don't think people view it as a spiritual/ healthy act per se but it simply is. The way South Africans love each other through sharing good food, tasty treats, and great music is truly a paradigm for life and healthy living! I mean people readily expect food to be organic, which is not the case in the West where consumables are processed and riddled with chemicals. I don't take it lightly that when I'm in SA I feel as if I'm transported into another world that I don't soon want to leave! I feel motivated, along with many others, to go after life with zest and look forward to communal events, occasionally addressing the weightier issues of life. Real talk, South Africa is therapy, my entire being is alive when I am there which is paramount for wholistic health and wellness!

SEAMOSS the latest fad in the US health market! I love the fact that I can do away with my cupboards looking like a pharmacy filled with supplements and just have sea moss! This plant product contains 92 out of the 100 minerals our bodies are made of and need to thrive. I had my first experience with sea moss in 2020 when my physical health spiraled uncontrollably. I was lethargic; chronically fatigued, my body incessantly itched all over, my liver and gastrointestinal tract expanded beyond belief, and my hair even fell out. I was in quite a miserable state, not recognizing my own reflection in the mirror as I weighed a whopping 136 kilograms from consuming FOOD! I sought immediate medical attention and was diagnosed with Listeria, a parasitic infestation of the liver claiming the lives of 80% of those affected. I refused to lay down my life and be a statistic, but medical attention was at a bare minimum with the world on lockdown. So, I did what the Bible says and turned to the herbs as I went on a frenzy of a search for an all-natural remedy. By faith, I was led to a homeopathic doctor in Houston, Texas that offered me a system of bitter herbs and cleanses to flush my body. One thing suggested was sea moss for its health benefits of massive mucus removal, gut cleansing, eyesight improvement, purifying the skin and weight loss. I was amazed at the results I was experiencing as I began to recognize my body and reflection again. Needless to say, sea moss is a staple in my daily diet now and I love it so much that I infuse it with my favorite fruits to make ingesting it an even more enjoyable experience!

ESTIFANOS ON HEALTH

My approach to health is my individual journey but only regarding how my story impacts the collective. Yes, health and wellness should undoubtedly be seen as a family affair. No man is an island and there is so much to be discovered and shared about these beautifully crafted instruments we live in and express ourselves through called bodies. We must seek to care for and love one another sincerely in every area of life. I think as Africans the culture centered around food, health, community, and unbiased support is the perfect heart space to actualize such!

ESTIFANOS THE MOVER 2000

AUGUST EDITION

Our history with the incredible Estifanos

"My word, I will never forget the times we shared on and off stage together!! Khabonina You and Tebogo will forever be family holding a special place in my heart, I love you loads! You honestly were sent by God to give me agency and space to actualize lifelong dreams that I just don't think would've happened for me in the US.

When I first landed in SA back in the early 2000's I remember you being one of the first people I met and instantly connected with as we danced at this huge party at "Horror Cafe"! LOL Hey, those performances at Urban Brew Studios, Melrose Arch and in the rain in Hammanskraal. Also, the first time I realized just how much SA loves you when you took the stage while filming "So You Think You Can Dance." That crowd praising you sounded like a full soccer stadium cheering for their favorite team after a score! I even referred of this time in our life in mybook "Open Doors of Opportunity."

Life has been good to me, and I've certainly had my share of sleepless nights, dreadful days and situations that would make the strongest amongst us throw in the towel. I can say I've learned to view everything as a lesson and a point of revelation of who God is as he is and who God is through me. Holding those things; the knowledge of the purpose for which I have incarnated at this time, and the connection between sole positivity and all good things manifested, keeps me in the heart space for the miraculous! There is truly no limit to what can manifest in the life of one that believes!"

WHY YOU SHOULD PEE AFTER SEX

You have probably heard this advice before, but wait, does it hold any water?

WHY SHOULD YOU PEE AFTER SEX ?

Pee is the power washer for the urethra (a tube where pee comes out of your body). If you pee after sex, germs in your urethra get the flush before they can cause a urinary tract infection (UTI).

"When you urinate, anything that was trying to get to the bladder gets pushed out with the urine," explains Dr. Zanotti. "Studies have not proven that urinating always reduces the risk of UTIs, but many women find it helpful."

Pee After sex

IT MAY HELP PREVENT UTIs

If you tend to get UTIs after sex, you're not alone — this happens to lots of women. The reason? Friction from sexual activity can spread bacteria. These germs can spread from oral, vaginal or anal sex.

"Many kinds of bacteria are harmless on the skin or in the anus," says Dr. Zanotti. "But during sex, these germs can spread to your urinary tract and eventually cause a UTI."

Women are more prone to UTIs than men simply because of their anatomy. In females, the urethra — the tube where urine comes out — is shorter and closer to the anus than in males. That makes it easier for germs to reach your urethra and travel into your bladder.

Pee After sex

HOW SOON AFTER SEX SHOULD YOU URINATE ?

Try to urinate within 30 minutes after sex. If you wait much longer, bacteria has a better chance of making it into your bladder.

SHOULD MEN PEE AFTER SEX , TOO ?

There's no harm in males peeing after sex, but there's not as much benefit. A male's urethra is longer than a female's, so they don't usually get post-sex UTIs. Common causes of UTIs in men include kidney stones and an enlarged prostate.

So, TO PEE OR NOT TO PEE ?! THAT IS THE QUESTION !?

WOMEN ON FIRE

We Love and support women over here at KhanaturalMag HQ! Most of all we have a special kind of love for OUR KHANATURAL Women readers and followers !

we took some time and selected faves from our gorgeous inspiring KHA' women for our August 2024 feature!

Meet YOLANDA CHEPAPE!

Above being a mother , she has over 10 years experience in Finance accounting and project costing. She held a high position in 2023 at MTC Telecommunications as a regional finance controller!

We definitely put our money on you Queen!

" In today's world, attractiveness is multifaceted, encompassing physical appearance, mental acuity, and emotional strength. I embrace who I am , flaws and all, I find it incredibly empowering. Confidence shines through and can inspire others to also embrace their true selves. Women today are breaking barriers in every field. Being smart and ambitious is attractive and serves as a powerful role model for others. In a world full of filters and curated lives, authenticity stands out. Being true to myself and sharing my genuine story can inspire others to do the same. "

- Yolanda Chepape

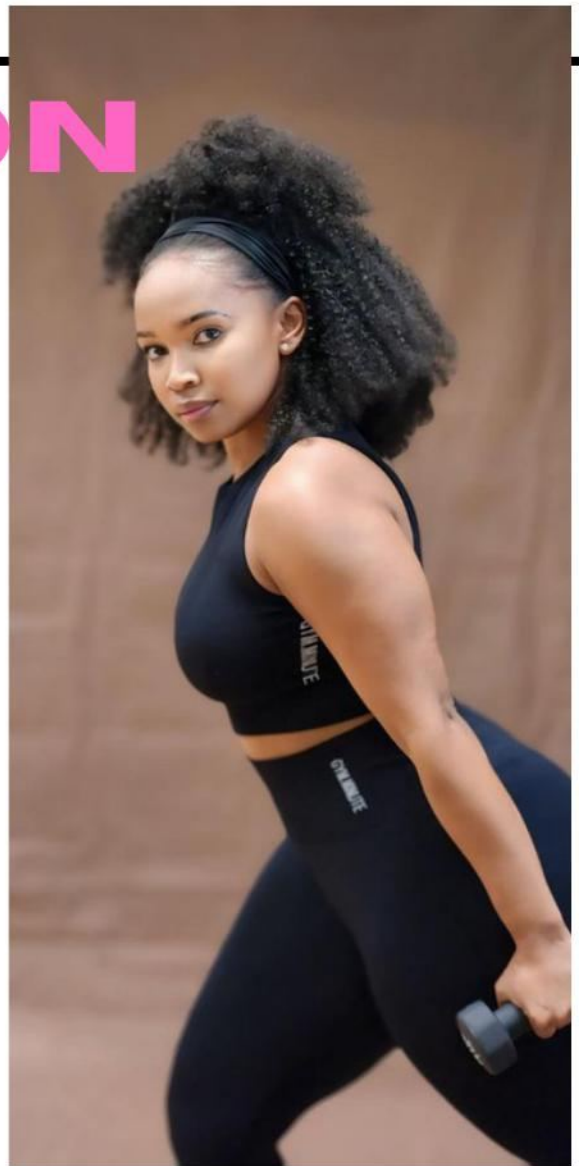

WOMEN ON FIRE

We Love and support women over here at KhanaturalMag HQ! Most of all we have a special kind of love for OUR KHANATURAL Women readers and followers !

we took some time and selected hot inspirational faves from our page for our August 2024 issue!

Khayelitsha born bombshell hailing from Western Cape, South Africa , Samela Maputaka is a University of Western Cape graduate. She's a Clinical Research Nurse at the Desmond Tutu Health Foundation. If her posts don't encourage you to get up and kick that blanket to the curb and get your exercise on , then you're not completely alive yet !

We love you Queen and officially subscribe to your positivity!

Samela Mapukata says "Being a hot, inspiring woman means confidence in your own skin. It's about embracing your individuality and using your strengths to motivate others. I use my platforms to inspire positivity and a healthy lifestyle. Through my engagements, I hope that I pave the way for others to follow and feel empowered in their own journeys."

WHAT IS ANXIETY & WHY IS IT ?!

Anxiety is a natural emotion. However, it can also cause physical symptoms, such as shaking and sweating. Anxiety disorders can affect daily life and can improve with treatment

K

Knowing the difference between typical feelings of anxiety and an anxiety disorder requiring medical attention can help a person identify and treat the condition

The American Psychological Association (APA) defines anxiety as “an emotion characterized by feelings of tension, worried thoughts, and physical changes like increased blood pressure.”

Anxiety and anxiety disorders :

Anxiety is a complex response to real or perceived threats. It can involve cognitive, physical, and behavioral changes.

Real or perceived danger causes a rush of adrenaline, a hormone and chemical messenger in the brain, which in turn triggers these anxiety reactions in a process called the fight-or-flight response. Some people may experience this response in difficult social situations or around important events or decisions.

TYPES OF ANXIETY DISORDERS:

There are several types of anxiety disorders according to the American Psychiatric Association's Diagnostic and Statistical Manual of Mental Disorders (DSM-5). This is the standard reference manual for diagnosing mental health conditions. Types of anxiety disorders include:

GENERALIZED ANXIETY DISORDER (GAD): This condition causes fear, worry and a constant feeling of being overwhelmed. It's characterized by excessive, frequent and unrealistic worry about everyday things, such as job responsibilities, health or chores.

AGORAPHOBIA: This condition causes an intense fear of becoming overwhelmed or unable to escape or get help. People with agoraphobia often avoid new places and unfamiliar situations, like large, open areas or enclosed spaces, crowds and places outside of their homes.

PANIC DISORDER: This condition involves multiple unexpected panic attacks. A main feature of the condition is that the attacks usually happen without warning and aren't due to another mental health or physical condition. Some people with panic disorder also have agoraphobia.

EDUCATE YOURSELF:

Education: Learning more about your condition and educating loved ones can help you and them better understand the condition and offer support.

Limiting or avoiding caffeine: Caffeine can make the physical symptoms of anxiety worse. Talk to your healthcare provider if you're concerned about your level of caffeine consumption.

WHAT IS ANXIETY ... CONTINUED

TAKING CARE OF MY ANXIETY DISORDER:

Aside from seeking professional medical help and treatment, certain strategies can help you manage an anxiety disorder and make treatment more effective. They include: stress management: chronic or intense stress worsens any anxiety disorder. Explore stress management techniques, like meditation, breathing exercises, mindfulness and regular exercise.

SPECIFIC PHOBIAS: A phobia is when something causes you to feel fear or anxiety that's so severe it consistently and overwhelmingly disrupts your life. There are hundreds of different types of phobias, and there's one diagnosis for almost all of them: specific phobia. Only one phobia, agoraphobia, is a distinct diagnosis.

SOCIAL ANXIETY DISORDER: This condition (formerly known as social phobia) happens when you experience intense and ongoing fear of being judged negatively and/or watched by others.

SEPARATION ANXIETY DISORDER: This condition happens when you feel excessive anxiety when you're separated from a loved one, like a primary caregiver. While separation anxiety in babies and toddlers is a normal stage of development, separation anxiety disorder can affect children and adults.

SELECTIVE MUTISM: This condition happens when you don't talk in certain situations because of fear or anxiety. It usually affects young children, but it can also affect adolescents and adults.

A note from Khanatural

You don't need to live with constant worry and fear. If you notice symptoms of an anxiety disorder, talk to a healthcare provider. It's best to get diagnosed and treated as soon as possible. Doing so can limit the problems that anxiety disorders can cause. Often, a combination of medications and counseling for anxiety can help you feel your best.

WHAT CAUSES ANXIETY DISORDERS?

Like other types of mental health conditions, researchers don't know exactly what causes anxiety disorders. But they think a combination of factors plays a role:

CHEMICAL IMBALANCES: Several neurotransmitters and hormones play a role in anxiety, including norepinephrine, serotonin, dopamine and gamma-aminobutyric acid (GABA). Imbalances in these chemicals can contribute to an anxiety disorder.

BRAIN CHANGES: A part of your brain called the amygdala plays an important role in managing fear and anxiety. Studies show that people with anxiety disorders show increased amygdala activity in response to anxiety cues.

GENETICS: Anxiety disorders tend to run in biological families. This suggests that genetics may play a role. You may be at an increased risk of developing one if you have a first-degree relative (biological parent or sibling) with an anxiety disorder.

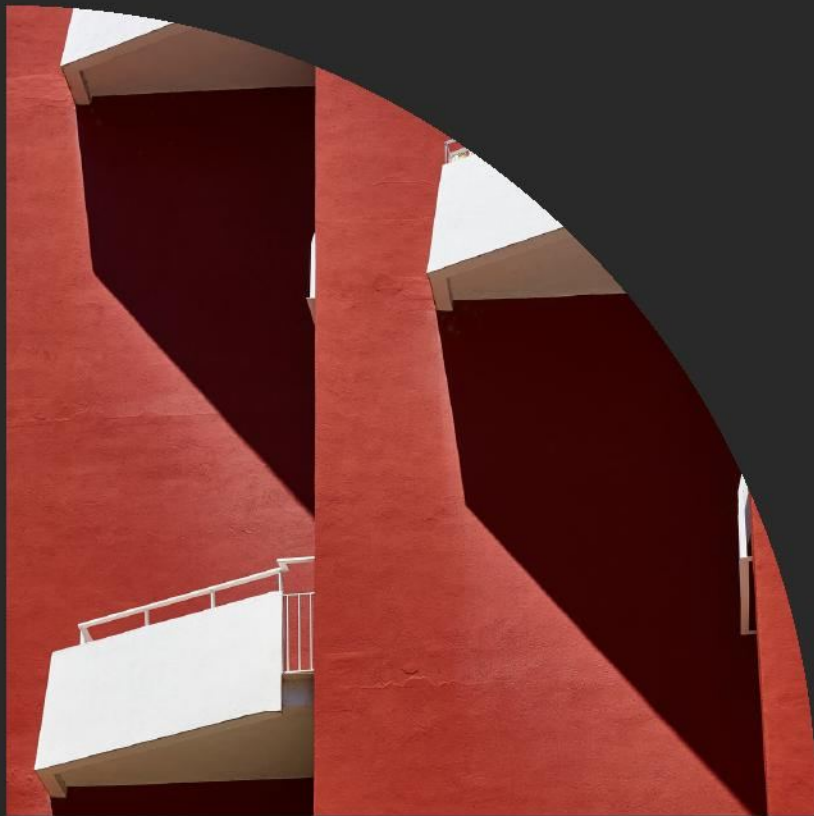

ENVIRONMENTAL FACTORS: Severe or long-lasting stress can change the balance of neurotransmitters that control your mood. Experiencing a lot of stress over a long period can contribute to an anxiety disorder. Experiencing a traumatic event can also trigger anxiety disorders.
