09 WHERE DO BROKEN FATS GO?

WHERE DO BROKEN FATS GO

Fat is an essential part of the human body, playing roles in energy storage and insulation

Fat loss occurs through a process called lipolysis and beta-oxidation, which converts fat into energy

A DRINK FOR YOUR LIBIDO

Which Foods Increase Libido?

While the individual foods that can increase libido are many, the compounds contained within, and the reasons why they're considered aphrodisiac foods, are similar. So that's how we'll break it down!

Editors Note

And just like that, we are on our 7th cover !
KhanaturalMag has been having a delightful run,
and I would like to thank all those who have stuck
with us through this wonderful journey.

When I started Khanatural magazine 7 months
ago, it started as a passion. There was no business
plan, there was no budget, and nothing expected .
But today, when I look at the response the
magazine has received, it has filled me with more
than I ever thought possible.

Khanatural Mag has managed to deliver the best
of everything-from glam covers to insightful
stories on health, wellness, and all things Seamoss
lifestyle.

Time is truly the best teacher, so today, having
withstood the test of time, I would like to take this
opportunity to thank every member of my team -
Editorial, Photography and Design, without whom
this would not have been possible. I would also like
to thank our future advertisers because we know
they're on their way

Nothing brings people together like good food,
and to celebrate our 7 th issue, we feature New
York based chef , model & host Charlise
Rookwood. We have captured her energetic and
dynamic persona. You are going to enjoy getting
to know this queen.

Enjoy our 7th issue and let us know what you think.

Wishing you a warm winter season in SA.

MEET CHARLISE

KhanaturalMag
special edition
July 2024
New York | South Africa

We at Khanatural have been fans of Charlise and her Vegan teachings ! When we finally got a chance to catch up with her and actually have a FULL ON conversation , we were deeply honoured.

Charlise Rookwood is a British-born culinary artist with Jamaican and Mauritian heritage. Mind you , we blew her mind when she learned that we are based in South Africa. She said : "wow , my father is from Jamaica my mother is from Mauritius!" And , she happily added "my Grandfather, who was a politician and poet lived in South Africa and worked very closely with Nelson Mandela.!" Our Queen is rushing to set at NBC but she managed to give us a bit more time.

"I worked in the music industry for over 25 years before becoming a full-time vegan chef, caterer and food vlogger. I have cooked and created event menus for celebrities such as Jim Jones, Dave Chapelle, Chaka Khan, Donnell Rawlings, and Remy Ma. Mind you, I've also catered for organizations such as LinkedIn, Soho House UK, and Apple."

We also did our own digging and learned that She has appeared twice on the Today Show and is the host of The Black Vegan Cooking Show produced by iOne Digital.

What a BOSS MOM !!!

KhanaturalMag

Queen Charlise

At Khanatural we don't support Dairy ! Why don't you ?

"I'm a mother against dairy... It's amazing how death changes you. The knowledge I gained trying to save my beloved father from stomach cancer was profound, and while I ultimately couldn't save him, his passing strangely enough gave me a second chance."

How did you change things thereafter?

"When I fell pregnant, I decided to honor my father by using what I'd learned, changing all my bad habits, and making a new beginning for myself, starting with what I chose to put into my body."

You are what you eat and that's a fact!

Do you believe that kids need dairy as a source of calcium ?

"I learnt very quickly that kids don't need dairy to get calcium— it comes from plants — and that the only milk my baby needed was my breast milk. Unfortunately, my milk supply was not optimal after being in labour for 46 hours, ending in an emergency Cesarean. After 2 months, my milk disappeared but I was able to move my baby girl over to fortified rice milk formula (pediatrician approved), which worked great."

Please share your other sources of calcium!

"As soon as my daughter Emi started to consume solids, she got all her calcium from tofu, black-eyed peas, soy milk, sesame seeds, almond milk, turnip greens, seaweed, white beans... the list is endless. From the beginning, Emi thrived on a plant-based diet, and my own health was transformed. Reducing disease in our bodies begins with removing mucus. Anything that creates mucus should not be consumed, including dairy products, which are especially mucus-producing."

This Queen is spitting facts !!!

KhanaturalMag

Charlise IS the Kitchen

The Black Vegan Cooking Show aims to make people feel like they're actually sitting in my kitchen. In each episode, I whip up fabulous plant-based dishes alongside a long list of celebrity guests – rapper Styles P, comedian Donnell Rawlings, Comedian Dean Edwards and celebrity chef Lauren Von Der Pool are only a few.

In addition to putting together droolworthy brunches, dinners, snacks, and drinks, I chat with each guest and makes viewers like a fly on the wall during an intimate meal.

My favorite dishes from the show include Jamaican Guinness no Punch, and Mauritian Curry No Duck – that said, you'll have to tune in to get the full recipe.

A DRINK FOR YOUR LIBIDO

Which Foods Increase Libido?

While the individual foods that can increase libido are many, the compounds contained within, and the reasons why they're considered aphrodisiac foods, are similar. So that's how we'll break it down.

And as you may know, you need to get a good supply of blood to your penis to experience a strong erection — so many of the foods below are also heart-healthy and good for boosting blood flow.

Which Drinks Increase Libido?

RED WINE :

The jury is out on whether alcohol can play a positive part of a healthy sex life. While some research suggests even moderate drinking can increase your chance of erectile dysfunction, red wine contains a decent amount of our libido-friendly flavonoid, Quercetin. In moderation, this can help prevent heart disease and controls blood sugar levels. So perhaps a glass or two wouldn't hurt. There are two sides to every story, so take it easy and see how you go.

TEAS :

While we've been talking about how much we love flavonoids, it's actually too much of one in particular that can make green tea a turn-off when enjoyed to excess.

Epigallocatechin gallate (EGCG), the flavonoid present in green tea, can actually reduce your testosterone levels, although you would have to drink a lot of it to notice any effects. A moderate intake of green tea can be beneficial, though, thanks to a compound called catechin. Catechin can help get rid of free radicals that can otherwise damage blood vessels, thus promoting healthy blood flow.

And while a nice milky cup of builders brew might not seem like the sexiest thing to get you going, black tea is the one which contains all the good flavonoids to help manage high blood pressure, boost circulation, and keep your immune system healthy too.

Vitamins can help increase your libido by helping your body produce a healthy level of testosterone. And this plays a huge part in having a healthy body and a healthy sex life.

CHARLISE

"Seamoss has been part of my life even before I was born" - Charlise Rockwood

Our Khanatural team in New York (courtesy of Charlise and her incredible team) caught up with the beautiful Queen in the middle of her shoot - for her new cook book launching in 2025 !

We know how she loves sea moss but we wanted to find out more about her history with the algae ! "Sea moss has been part of my life even before I was born. Being half-Jamaican, it was always a staple in our home." She added : "My father would buy fresh sea moss, soak it, blend it, and sometimes add it to his delicious Guinness Punch.." she laughs sadly thinking of her late King !

"We took a spoonful daily, and it's a habit my daughter and I continue. When I'm too busy to prepare fresh sea moss, I always keep gel in the fridge. Every morning, we both take a spoonful—it's as essential to us as drinking water."

We love how she involves her daughter in her lifestyle, we believe that this kind of a lifestyle needs to be shared. Charlise states facts by saying "Sea moss is packed with nutrients that support digestion, boost immunity, and enhance skin health. Its rich iodine content is great for thyroid function, and its antioxidants promote overall wellness."

Ok Queen, what does your day look like without seamoss ?

She responded : "Honestly, my day wouldn't be complete without sea moss." ! We couldn't agree more !

HOW FAT LEAVES THE BODY

HOW DOES FAT LEAVE THE BODY? UNRAVELING THE SCIENCE OF WEIGHT LOSS

INTRODUCTION:

Fat loss is often not fully understood. Do you know how does fat leave the body? where it goes when you lose weight? You're not alone if you're unsure. Here, we'll explain the science of fat loss. It will also have useful tips for weight loss. You might think that fat turns into energy or muscle. But it's not that simple. Let's dive deeper to understand the process. We'll look at the role of fat. We'll explore how your body burns fat. We'll talk about the factors that affect fat loss. Lastly, we'll share tips for weight contro

The Science of Fat and Weight Loss

Have you ever thought about what fat is? How does fat leave your body? How does it work in our bodies? Let's look at different body fat types and their roles. We'll also explain how our body stores and uses fat.

The Role of Fat in the Human Body

Fat has key roles. These are:

Storing energy: Fat stores extra energy as triglycerides

Keeping us warm: Fat insulates us

Making hormones: Fat tissue makes hormones that control many biological processes

Fat loss byproducts and how they leave the body

Water, carbon dioxide, and energy

When stored fat breaks down, it turns into water, CO₂, and energy

The role of respiration in fat loss

While breathing, we breathe out CO₂. About 84% of lost fat leaves our bodies as CO₂.

Excretion via bodily fluids

The remaining 16% of lost fat becomes water. This leaves our bodies through urine, sweat, and other bodily fluids.

Factors Influencing Fat Loss

A lot of things can affect your rate of fat loss. Your diet, exercise routine, hormones, and metabolism. Each plays its part.

1. Diet and Nutrition
2. Exercise and physical activity
3. Hormonal balance and metabolic rate

Let's break down each factor.

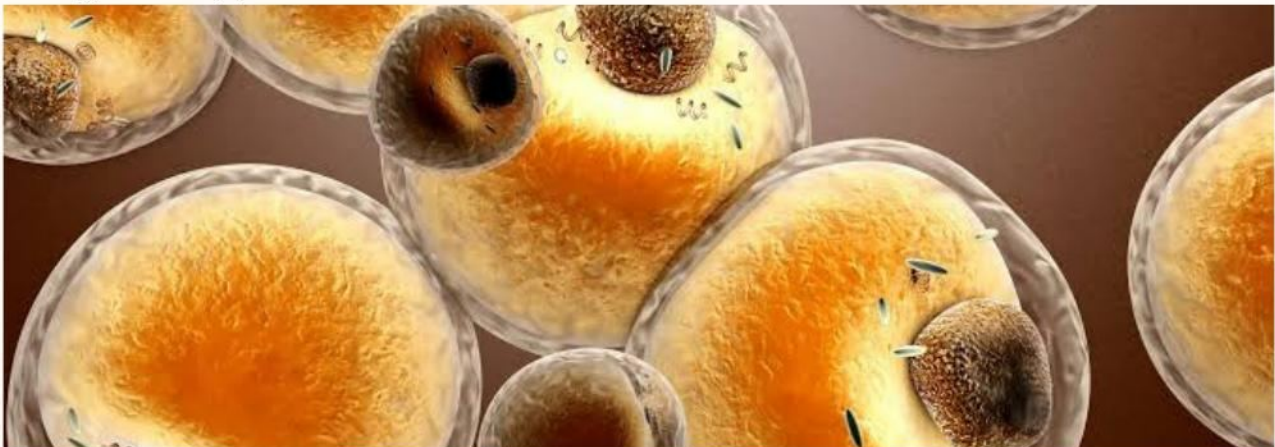

How Does Fat Leave the Body? Unraveling the Science of Weight Loss

2024**

HOW FAT LEAVES THE BODY

1. DIET AND NUTRITION :

Eating well is important for weight control and fat loss. If you don't eat right, your body won't burn fat as it should. Getting the right balance of carbohydrates, proteins, and fats is key. Each plays a unique role in your body. The right balance may provide enough energy and support fat loss.

2. EXERCISE AND PHYSICAL ACTIVITY:

The role of exercise in burning fat
Exercise helps burn calories. This creates a calorie deficit and aids fat loss. It also improves blood circulation, feeding our cells with oxygen and nutrients. This may help remove waste too. Different types of workouts for maximizing fat loss
Mixing up your workouts is helpful. Some good ideas are aerobic activities, resistance training, and high-intensity interval training (HIIT). This may help with fat loss.

3. HORMONAL BALANCE AND METABOLIC RATE:

Influence of hormones on fat storage and burning

Hormones play a big role in weight and body fat control. For instance, insulin and leptin can affect your appetite and energy balance.

How metabolism affects weight loss
Your metabolism determines how efficiently your body changes food into energy. A slow metabolism can make losing weight harder. But a quick one can help burn fat.
